

Configurator

Easy System Configuration Automation

Using Now Micro Configurator allows customers to apply first version configurations from the cloud, making for a more flexible and nimble field deployment process. This service was developed to address common customer pain points when deploying systems in the field

Pain Points

- ✗ Customization takes too long
- ✗ Manual configuration at deployment time is error-prone
- ✗ Baking all your system settings and configuration into an image results in long rebuild cycles

Solution

- ✓ Use our collection of common deployment configuration options to customize the machine to have the exact out of box experience you desire
- ✓ Moves customization to the appropriate state of the process (kitting or deployment) and automates it
- ✓ Allows you to create and test configs on your schedule
- ✓ Spend time and effort on the value added portions you do best
- ✓ Apply the same configuration to all your machines with a simple six digit code
